

The separation of money and state

How Spark is using Bitshares to create a financial system based on stateless currencies.

Sparkdex, our bit
shares gateway

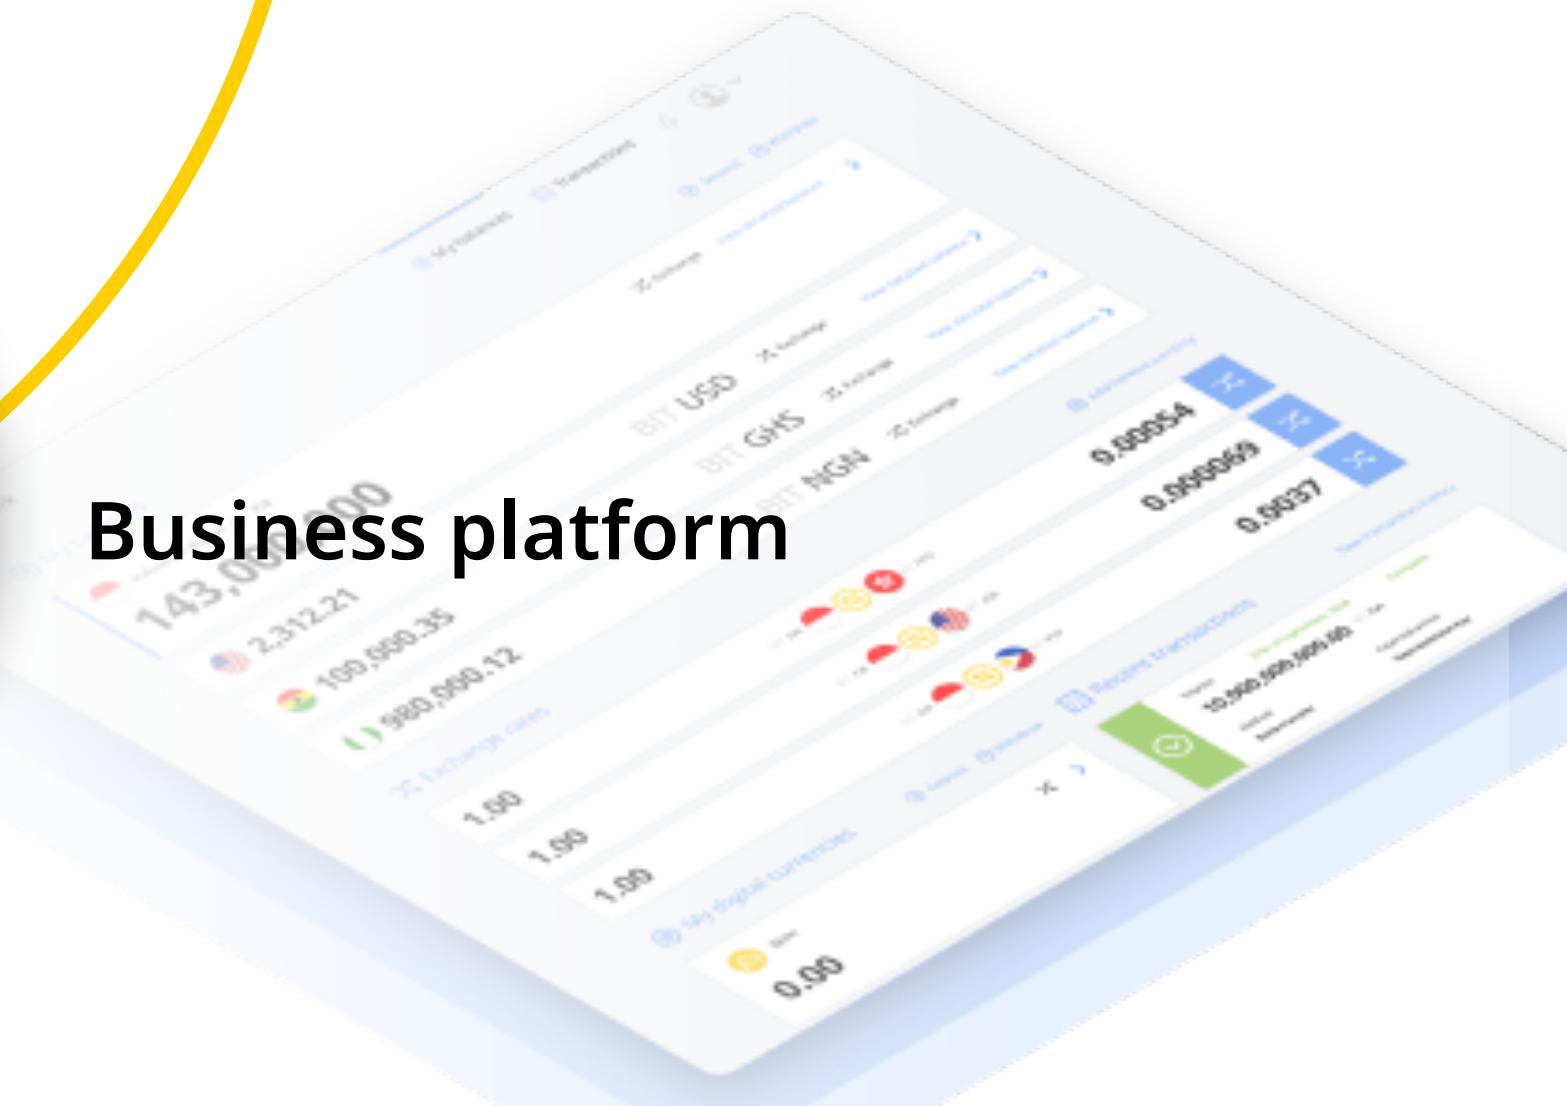

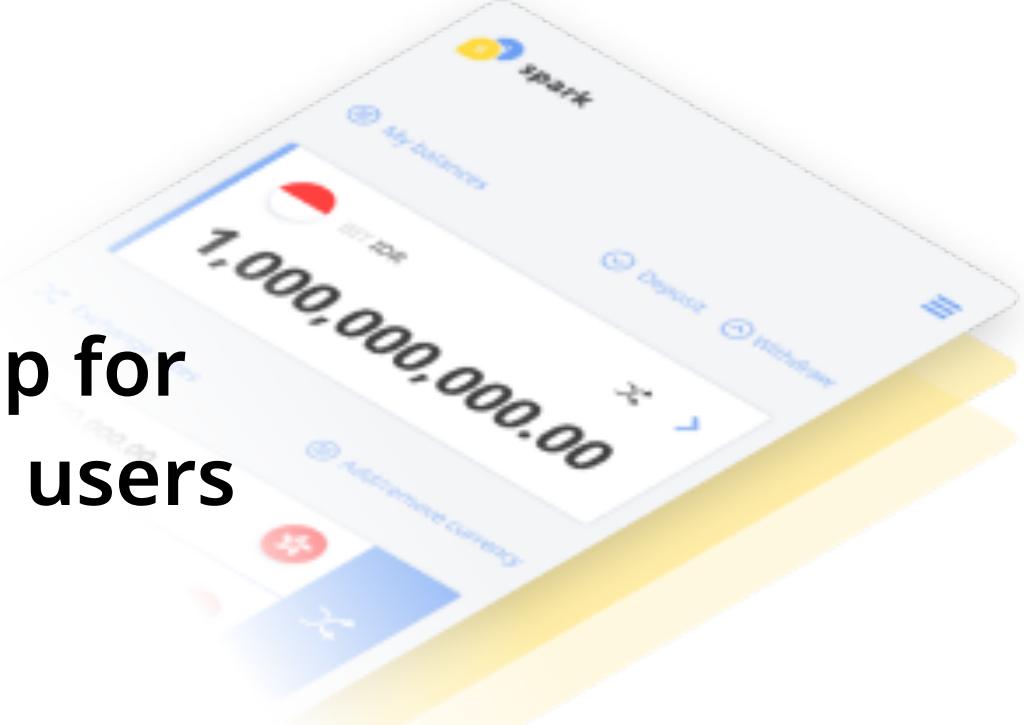

Business platform

Our reward
token, ZEPH

Mobile app for
individual users

**2.2bn people do not have
access to bank account.**

The ability to reproduce and
distribute national currencies
without the consent of the issuing
state is revolutionary.

This allows true price discovery and liquidity for national currencies to emerge outside of traditional constraints

Frontier markets are where stablecoins matter most

A trustless and liquid
Ukrainian Hryvnia

Our roadmap ahead

Now

- Development on our business platform
- Building liquidity on Sparkdex
- ZEPH buybacks commence in October

Next

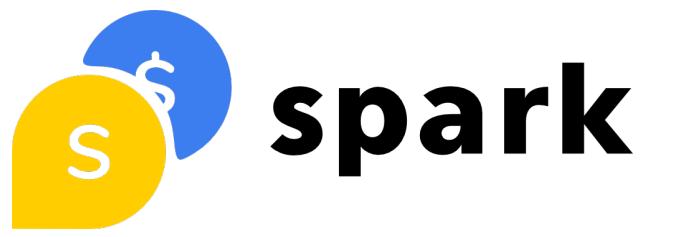

- Revisions to our mobile app, and refinement of the cash-in, cash-out functionality
- Preliminary market entry on key corridors

Later

- Creation of additional financial 'products' for Spark users, ie index funds.
- Hardware wallet integration for Trezor
- Making it easier for more people to run nodes and create price feeds

Bitfest, 2018

Thank you for making this
an incredible community.
